

Sustainability Commitment

At Kura Accounting, we believe sustainability isn't just about global supply chains, it's about the everyday choices schools make. One of the biggest impacts we can have together is reducing waste and inefficiency in finance and administration.

Our software helps schools cut down on:

- **Paper waste:** Move away from printed reports, invoices, and binders.
- **Unnecessary printing:** Digital workflows save pages, energy, and valuable time.
- **Manual data entry:** Automation reduces duplication, saves resources, and improves accuracy.

For us, sustainability is about being practical. Every report generated digitally, every process streamlined, contributes to a leaner, greener way of working. It's good for schools, good for budgets, and good for the environment.

Our Commitment

Kura Accounting is committed to supporting New Zealand schools in working smarter, saving time and resources, and building a more sustainable future for education.

Shaping a Sustainable Future: Our 2026 Plan for NZ Schools

1. **Go Digital:** Transition school office workflows to 95% digital, cutting paper waste, reducing energy use, and improving administrative efficiency.
2. **Modernise Finance Education:** Try to collaborate with NZQA to deliver a fully digital accounting curriculum. Leveraging our international experience, we aim to close gaps in software skills and practical financial knowledge, including blockchain, cryptocurrencies, and other emerging technologies, preparing students for success locally and globally. This would make NZ's accounting curriculum among the most comprehensive in the world.
